PROFILE

I build the reporting layer for a national retail company: Power BI models on top of BigQuery, the access rules around them, and the small cloud jobs that keep them running and delivered on time. Business intelligence since February 2022, with a physics degree behind it (theoretical physics, numerical methods).

EXPERIENCE

Business Intelligence Developer · PT Eigerindo MPI Jun 2025 – present

- Build and maintain Power BI dashboards that regional and branch managers across Indonesia use for sales, store performance and incentive tracking.
- Moved heavy retail models to DirectQuery on BigQuery. Row-level security reads one master access table, so changing who sees which region is a table update instead of a model edit.
- Implemented Microsoft Fabric for ingestion, transformation and semantic models alongside the BigQuery warehouse.
- Wrote a Cloud Run service that sizes the Fabric capacity on a schedule (smaller overnight, standard in working hours, larger on request), logs each change and emails a monthly summary of hours per size and estimated cost.
- Automated recurring reports as scheduled Python jobs that query BigQuery, build the Excel file and email it; the daily sales report runs this way.
- Moved 17 Power BI projects from manual backup folders into Git (PBIP/TMDL), with a standard repo layout, changelog and a tag for every published version.
- Standardised visual templates so reports look and behave the same across regions.

Power BI, DAX, Power Query, BigQuery SQL, Microsoft Fabric, Python, FastAPI, Cloud Run, Cloud Scheduler, Git, PowerShell

Business Intelligence Developer · PT Mitra Talenta Group (CELERATES) Feb 2022 – Jun 2025

- Built 3 Power BI dashboards and supported 2 more for client PT Mitra Solusi Telematika: Activity Based Costing, Innovation Funnel, KPI & Incentive Funnel, Table of Duty.
- Ran data warehouse batches in Pentaho Data Integration; DBS Archiving phase 2 (Feb – Mar 2022).
- Handled data anomaly, discrepancy and enhancement tickets.
- Mentored students in the Kampus Merdeka certified independent study programme, Data Analytics & BI track (batch 4: 23 students; batch 7).

Marketing Research & Development · PT Tunas Dwipa Matra Jan – Jul 2021

- Analysed the customer database (socio-economic status, occupation, income, age, city) with KNIME, Python and Excel.
- Built Power BI and Tableau dashboards on customer profile and repeat orders.
- Ran customer and competitor surveys; tracked commodity prices at farm and market level and macro indicators.

Laboratory Assistant, Physics · Institut Teknologi Sumatera Sep 2016 – May 2019

- Ran physics practicum sessions with lecturers, maintained lab equipment and reported on student progress.

EDUCATION

Institut Teknologi Sumatera (ITERA) · B.Sc. Physics Aug 2015 – Mar 2020

Theoretical Physics group, mathematical and computational physics. Thesis: traffic dynamics interaction analysis.

SKILLS

Reporting	Power BI (DAX, Power Query, dynamic RLS, PBIP), Looker Studio, Tableau, Excel
Data	BigQuery SQL, PostgreSQL, SQL Server, MySQL, Pentaho Data Integration, KNIME
Platform	Microsoft Fabric, Google Cloud Run, Cloud Scheduler, Vercel
Code	Python (pandas, scikit-learn), R, TypeScript / Next.js, PowerShell, Git
Other	SPSS, Matlab, Scilab, C++

PROJECTS

2026	retail-dashboard — web retail KPI dashboard (Next.js, TypeScript, Recharts, NextAuth)
2026	jakarta-traffic-congestion-analysis — peak-hour corridor speeds from Jakarta open data (Python)
2026	original_reproduction / enhanced_simulation — thesis traffic model ported from Scilab to Python, finite-volume solver and Streamlit app
2026	supply-chain-research — production-flow bottlenecks with the ADR conservation-law model and Monte Carlo (Python)
2026	artemis-ii-analysis — Artemis II trajectory from NASA JPL Horizons ephemeris (Python)
2026	cashora — personal finance Telegram bot synced to Google Sheets and Looker Studio (Python)
2023	Market Share Dashboard — final project, PROA Business Intelligence Analyst (Power BI)
2021	Credit card customer segmentation and clustering lab challenge — Shift Academy (Python)
2020	Trip Advisor sentiment analysis (TF-IDF, LSTM) and Toronto Bikeshare analysis — FGA Kominfo × STEI ITB

TEACHING

Sep 2024	Data Analytics untuk Efisiensi dan Inovasi Bisnis — Studium Generale, Fisika ITERA
Jul 2023	Building Captivating Interactive Reports with Power BI — Celerates School
May 2023	Future Business Intelligence for the Mining Industry — Sains Data, ITERA
2023–24	Mentor, Data Analytics & BI track, Kampus Merdeka batches 4 and 7 — CELERATES

COURSES

2023	PROA Business Intelligence Analyst	Kominfo × Binar Academy
2022	SQL	Progate
2021	Belajar Machine Learning dan Visualisasi Data	Dicoding
2020	FGA Data Science	Kominfo × STEI ITB
2020–21	Data Analyst Track	DQLab
